

- The objective function  $Z = ax + by$  of an LLP has maximum value 42 at (4,6) and minimum value 19 at (3,2). Which of the following is true?
  - $a = 9, b = 1$
  - $a = 5, b = 2$
  - $a = 3, b = 5$
  - $a = 5, b = 3$
- The corner point of the feasible region of a linear programming problem are (0,4), (8,0) and  $(\frac{20}{3}, \frac{4}{3})$ . If  $Z = 30x + 24y$  is the objective function, then (maximum value of Z - minimum value of Z) is equal to
  - 40
  - 96
  - 120
  - 136
- Solve the following linear programming problem graphically :
 
$$\begin{aligned} \text{Maximum : } Z &= x + 2y \\ \text{subject to constraints : } x + 2y &\geq 100, \\ 2x - y &\leq 0, \\ 2x + y &\leq 200, \\ x &\geq 0, y \geq 0. \end{aligned}$$
- Engine displacement is the measure of the cylinder volume swept by all the pistons engine. The piston move inside the cylinder bore

Figure 1: Engine

The cylinder bore in the form of circular cylinder open at the top is to be made from a metal sheet of area  $75\pi cm^2$

Based on the above information, answer the following questions:

- (a) if the radius of cylinder is  $r$  cm and height is  $h$  cm, then write the volume  $V$  of cylinder in terms of radius  $r$ .
- (b) Find  $\frac{dV}{dr}$ .
- (c)
  - i. Find the radius of cylinder when its volume is maximum.
  - ii. For maximum volume,  $h > r$ . State true or false and justify.
